

Surgical Risk Calculator

Report Name: Manilla Calderon Gpe

American College of Surgeons

Procedure: 50060 - Nephrolithotomy: removal of calculus

Risk Factors: Age (70), Female, BMI (18.6)

Note: Your Risk has been rounded to one decimal point.

Outcomes		7401	c. <u>1001 1</u>	<u>vion</u> rido i	ocen rou	naca to t	one deen	nar point				Your Risk	Average Risk	Chance of Outcome
Serious Complication		10	20	30	40	50	60	70	80	90	100%	5.2%	7.3%	Below Average
Any Complication		10	20	30	40	50	60	70	80	90	100%	3.5%	5.0%	Below Average
Pneumonia		10	20	30	40	50	60	70	80	90	100%	0.1%	0.1%	Below Average
Cardiac Complication		10	20	30	40	50	60	70	80	90	100%	0.2%	0.1%	Above Average
Venous Thromboembolism		10	20	30	40	50	60	70	80	90	100%	0.2%	0.3%	Below Average

Disclaimer: The ACS Surgical Risk Calculator estimates the chance of an unfavorable outcome (such as a complication or death) after surgery. The risk is estimated based upon information the patient gives to the healthcare provider about prior health history. The estimates are calculated using data from a large number of patients who had a surgical procedure similar to the one the patient may have. Please note the risk percentages provided to you by the Surgical Risk Calculator are only estimates. The risk estimate only takes certain information into account. There may be other factors that are not included in the estimate which may increase or decrease the risk of a

complication or death. These estimates are not a guarantee of results. A complication after surgery may happen even if the risk is low. This information is not intended to replace the advice of a doctor or healthcare provider about the diagnosis, treatment, or potential outcomes. ACS is not responsible for medical decisions that may be made based on the risk calculator estimates, since these estimates are provided for informational purposes. Patients should always consult their doctor or other health care provider before deciding on a treatment plan.

Definitions

 $\underline{Serious\ Complication}\ includes\ important\ problems\ that\ occur\ after\ surgery\ including:$

- Heart complication: Includes heart attack or sudden stopping of the heart
- Pneumonia: Infection in the lungs
- Kidney failure: Kidneys no longer function in making urine and/or clearing the blood of toxins
- Blood clot: Clot in the legs or lungs
- Return to the OR: The need to go back to the operating room due to a problem after the prior surgery
- Wound infection: An infection at or near the area where the surgery was performed
- Sepsis: Whole-body infection
- Intubation: The need to put the breathing tube back in after surgery to help breathing

$\underline{Serious\ Complication}\ (Continued):$

- Urinary tract infection: Infection of the bladder and kidneys
- Wound disruption: Separation of the layers of a surgical wound

Any Complication also includes:

- Wound infection: An infection at or near the incision
- Extended time on the ventilator: Ventilator assistance for breathing longer than 48 hours
- Stroke: An interruption in blood flow to the brain

 $\underline{\text{Discharge to Nursing or Rehab facility}}\text{: Discharge to a facility other than home}$
